

Balloon Explorium

Building a “Turkey Fryer” Burner for launching Tissue Paper Balloons

The Turkey Fryer burner generates considerable heat. Severe caution should be used by the adults that use it to fill up the tissue paper balloons. Insulated leather gloves should be used when holding the balloon over the burner.

Parts List:

- Burner from Turkey Fryer
- 6" diameter by 24" duct
- 8" diameter by 24" duct
- 6" diameter to 6" by 10" conversion duct
- 8" diameter to 12" by 12" conversion duct.

Assembly instructions:

1. Place the duct tubes into their corresponding conversion duct pieces.
2. Place the 6" diameter duct assembly on the turkey fryer.
3. Place the 8" diameter duct assembly over the 6" diameter duct assembly already on the turkey fryer. This results in an air space between the 6" diameter duct assembly and the 8" diameter duct assembly.
